Log Insights

The right insights for the right people

Questions, query evidence and recommendations

TO FILL / Team name / presenters / October 2026

APPROACH AND SYSTEM

SereneDB computes. Claude explains.

CLIENTS

Claude Code / Desktop
MCP over stdio

Web chat
AI SDK adapter

↔

SHARED TOOL REGISTRY

Zod contracts
Parameterized SQL
Limits and fact IDs

↔

SERENEDB

BGL + OpenStack
Search and aggregation

Counts, trends, episodes and percentiles

RETRIEVE

search_logs / get_log_context

Limited hits and nearby events.

AGGREGATE

count_events / event_trend

Whole-scope counts and trends.

VERIFY

check_claims

Submitted numerical claims against fact IDs.

Clients share role playbooks. The agent selects tools. The registry saves receipts with scope, facts and truncation. Full catalog in the appendix.

QUERY EVIDENCE

The evidence for one worked investigation

BGL / 2005-2006

TO FILL / Loaded population, full-span grouped counts + fact IDs

OPENSTACK / 2017

TO FILL / Loaded population, full-span grouped counts + fact IDs

FULL-TEXT SEARCH AND NEARBY EVENTS

TO FILL / Question, dataset, UTC window and filters

TO FILL / Verbatim error, surrounding events and event IDs

GROUPED COUNTS AND TREND

TO FILL / Chart from actual tool results, with units and fact IDs

Separate dataset time axes.

TO FILL / Receipts for retrieval + aggregation on both datasets / full corpus or samples / data version / UTC [start, end) / filters / truncation

The same case, three different decisions

ENGINEER

What happened?

TO FILL / Observed error and context + fact IDs

NEXT DIAGNOSTIC CHECK

TO FILL / Specific check and missing causal evidence

TEAM LEAD

What recurs?

TO FILL / Episodes, trend and fictional owner + fact IDs

TEAM INVESTIGATION

TO FILL / Owner, check and completion condition

MANAGER

What comes first?

TO FILL / Priority by episodes and breadth + fact IDs

PRIORITY DECISION

TO FILL / Next action, trade-off and review condition

TO FILL / Shared scope and actual receipts / role-specific unknowns / check_claims checked count and outcomes

WORKED INVESTIGATION

The check behind the recommendation

INITIAL HYPOTHESIS

TO FILL / Initial explanation or priority

Name the evidence that could distinguish it.

EXECUTED CHECK

TO FILL / Tool input, result and actual fact IDs

Use a check that actually ran.

DECISION AFTER THE CHECK

TO FILL / Changed, retained or still open, with reason

Supported does not establish causality.

TO FILL / Public worked investigation and receipt links

What the evidence leaves open

LIMITS OF THE CONCLUSION

Log entries and episodes do not establish incidents or outages. Ownership is fictional.

Causal proof, downtime and business impact need additional evidence.

TO FILL / Case-specific unknowns and result truncation

SOURCE AND SETUP

TO FILL / Public HTTPS link

WORKED INVESTIGATION

TO FILL / Public HTTPS link

PRESENTATION PDF

TO FILL / Public HTTPS link

Public repository, PDF and evidence must open without signing in or requesting access.

QUERY EVIDENCE

An auditable tool call

EXECUTED SQL AND BOUND PARAMETERS

TO FILL / Paste exact SQL and parameters from the saved receipt. No illustrative query.

TOOL CALL AND RESULT

TO FILL / Tool name and validated input

TO FILL / Relevant returned rows, units + fact IDs

TO FILL / Duration, population and truncated status

TO FILL / Public receipt link / data version / scope / check_claims checked count and outcomes. Checks cover submitted numerical claims, not explanations.

TOOL DESIGN

A small tool set the agent can choose

FIND AND INSPECT

describe_corpus
Scope, field meaning and capabilities

search_logs
Full-text query, time filters, bounded hits

get_log_context
Nearby events or aggregate precursor evidence

check_claims
Value, metric and group against a fact ID

MEASURE AND COMPARE

count_events
Grouped counts, shares and period comparison

event_trend
Buckets within one dataset's time span

recurring_patterns
Episodes, breadth and investigation order

latency_stats
OpenStack API access percentiles and rates

Inputs: validated scope, filters and limits. Outputs: data, facts, receipt and truncation notes. Source: actual analytics registry.

EVALUATION

Measured quality and its limits

QUALITY EVIDENCE

TO FILL / Saved baseline versus playbook results, per role

TO FILL / First holdout, sample size, failures and follow-up runs

TO FILL / Claim mismatches, unresolved facts and scope errors

PERFORMANCE EVIDENCE

TO FILL / Database time from receipts

TO FILL / End-to-end time and model/tool calls from run artifacts

TO FILL / Tokens and estimated API cost with pricing date

TO FILL / Public evaluation report / model + configuration / data version / run artifact links / limitations
